BINTANG BASMARA ABDULLAH

AI & Automation Specialist | n8n · Supabase · WhatsApp Cloud API · Claude

Tangerang, Banten, Indonesia • basmarabintang@gmail.com • linkedin.com/in/bintang-basmara-5a347b371 • github.com/basmarabintang-source • Open to work (hybrid / remote)

ABOUT ME

I figure out what a business should automate, then I build it myself, from the database to the screens staff use and the WhatsApp messages customers get. In the last five months I built most of the internal systems a multi-branch Honda dealership now runs on every day, for 50+ staff and 11,000+ customers. I work with Claude, n8n and Supabase, and I don't call something done until its numbers match the source data. I'm also a Certified Ethical Hacker (CEH).

SKILLS

Every day: Claude (Claude Code, API, Agent SDK), n8n, Supabase (Postgres, row-level security, Edge Functions, cron jobs), WhatsApp Cloud API, JavaScript, SQL

Also: Messenger & Instagram APIs, Telegram bots, WebRTC calling, web push, PWAs, Flutter/Dart, Vercel, Python (Whisper, Tesseract, OpenCV), ESP32 sensors, RAG & embeddings

EXPERIENCE

Artificial Intelligence Specialist May 2026 – Present

PT Mitra Makmur Borobudur (Honda Dealer & AHASS Service) • Tangerang, Banten • Hybrid

I run the dealership's internal systems. I agree with management what to automate, build it, and keep it working.

- Built **Superfast**, our own WhatsApp platform, so customer chats no longer depend on a paid vendor. Sales and admins answer 1,100+ conversations in one inbox, take WhatsApp calls in the browser, and see Facebook and Instagram messages in the same place.
- When the system slowed down twice during the morning blasts, I rebuilt how incoming messages are saved so nothing gets lost when the database is busy. Every change now gets a load test before it goes live.
- Turned the telemarketing team's hand-filled grading sheet into a live screen. It grades each person's reply speed, follows every lead to SPK and delivery, estimates incentives, and exports to Excel.
- Automated the messages customers actually wait for: free-service (KPB) due dates, STNK/BPKB ready, and booking reminders. Management also gets a 17:30 report in their WhatsApp group every day without anyone typing it.
- Built the staff attendance app (Flutter and PWA) with face check, a GPS fence per branch, automatic clock-out, and leave requests that ping the supervisor's phone.
- Built the sales team's prospect tracker, stock allocation with approvals, and a TV board in the workshop showing all 10 service lanes, so nobody has to walk over and ask where a bike is.
- Rebuilt hondaborobudur.com with a 20,900-item parts catalog staff update themselves. Also audited our database permissions and cut the functions anyone could call without logging in from 99 to 13.

PUBLIC PROJECTS

- **n8n-finance-workflows** (github.com/basmarabintang-source/n8n-finance-workflows): six finance workflows (vendor checks, AP 3-way match, payments, bank reconciliation, collections, onboarding) that run on demo data with no credentials. They catch a forged bank-account change instead of paying it.
- **Arzopa** (github.com/basmarabintang-source/arzopa): say a sentence or snap a receipt and get a transaction back. It runs fully on the device (Whisper, Tesseract, OpenCV), because people's spending shouldn't leave their machine.

CERTIFICATIONS

Certified Ethical Hacker (CEH), EC-Council (Jul 2024 – Sep 2027) • **Claude Code in Action**, Anthropic (Jul 2026, ID 8btum6zi35yu) • **Introduction to Claude Cowork**, Anthropic (Jun 2026, ID vads9u3m7rbs) • **AI Fluency: Framework & Foundations**, Anthropic (2026)

EDUCATION & LANGUAGES

Self-taught in AI, automation and software • Bahasa Indonesia (native), English (professional)
