BINTANG BASMARA ABDULLAH

AI & Automation Specialist | n8n · Supabase · WhatsApp Cloud API · Claude

Tangerang, Banten, Indonesia • basmarabintang@gmail.com • linkedin.com/in/bintang-basmara-5a347b371 • github.com/basmarabintang-source • Open to work (hybrid / remote)

ABOUT ME

I'm the person at a Honda dealership who turns "we do this by hand every day" into something that just runs. Since May I've built most of the systems the dealership uses daily: the WhatsApp inbox, customer reminders, attendance, sales tracking, even a TV board for the workshop. More than 50 staff work in them and 11,000+ customers get messages from them. I mostly build with Claude, n8n and Supabase. I'm also a Certified Ethical Hacker.

SKILLS

Use every day: Claude (Claude Code, API, Agent SDK), n8n, Supabase (Postgres, row-level security, Edge Functions, cron), WhatsApp Cloud API, JavaScript, SQL

Have built with: Messenger and Instagram APIs, Telegram bots, WebRTC calls, web push, PWAs, Flutter, Vercel, Python (Whisper, Tesseract, OpenCV), ESP32

EXPERIENCE

Artificial Intelligence Specialist May 2026 – Present

PT Mitra Makmur Borobudur (Honda Dealer & AHASS Service) • Tangerang, Banten • Hybrid

I look after the dealership's internal systems: management and I decide what to automate, then I build it and keep it running.

- **Superfast** is our own WhatsApp inbox. We were paying a vendor for WhatsApp, so I built one we own. Sales and admins now handle 1,100+ conversations there, pick up WhatsApp calls in the browser, and Facebook and Instagram messages come into the same inbox.
- It choked twice under heavy load. I fixed both the same day and changed how messages are stored, so a busy database can't lose them anymore. Nothing goes live now without a load test.
- The telemarketing team used to grade reply speed by hand in Excel. Now a screen does it live for each person, and also shows their leads all the way to SPK and delivery, plus what their incentive looks like.
- Customers get their KPB service reminders, "your STNK is ready" and booking messages on WhatsApp automatically. Management gets a 17:30 report in their group chat every day that nobody has to type.
- Attendance app with a face check and a GPS fence for each branch. It clocks people out if they forget, and leave requests go straight to the supervisor's phone.
- Smaller tools people use every day: a prospect tracker for sales, stock allocation with approvals, and a TV in the workshop that shows all 10 service lanes, so nobody has to walk over and ask where a bike is.
- Rebuilt hondaborobudur.com, including a 20,900-item parts catalog the staff update themselves. I also went through our database permissions and closed 86 functions anyone could call without logging in.

PUBLIC PROJECTS

- **n8n-finance-workflows** (github.com/basmarabintang-source/n8n-finance-workflows): six finance workflows you can run yourself on demo data, no credentials needed. My favourite test case is a forged bank-account change. It gets caught instead of paid.
- **Arzopa** (github.com/basmarabintang-source/arzopa): say a sentence or snap a receipt and you get a transaction back. Everything runs on the device (Whisper, Tesseract, OpenCV), because people's spending shouldn't leave their machine.

CERTIFICATIONS

Certified Ethical Hacker (CEH), EC-Council (Jul 2024 – Sep 2027) • **Claude Code in Action**, Anthropic (Jul 2026, ID 8btum6zi35yu) • **Introduction to Claude Cowork**, Anthropic (Jun 2026, ID vads9u3m7rbs) • **AI Fluency: Framework & Foundations**, Anthropic (2026)

EDUCATION & LANGUAGES

Self-taught. I learned by building real things, mostly with AI as my pair programmer. • Bahasa Indonesia (native), English (professional)
